Question 1

How to Attempt?

Is Palindrome possible?

Write a function to find whether it is possible to get a palindrome number from a given number by re-arranging the positions of its digits. If yes, the function should return 2, else it must return 1.

Example1: If the given number is 21251, it is possible to form a palindrome by re-arranging its digits, as 21512 or 12521. So the function must return 2.

Example2: If the given number is 2125, it is not possible to form a palindrome by re-arranging its digits. So the function must return 1.

Note: All diits of the given number should be retained while deciding whether they can together form a palindrome.

Assumption: The input number will be a positive integer number >= 1 and <= 25000.

```
1 import java.io.*;
2 import java.util.*;
3
4 // Read only region start
5 class UserMainCode
6 {
7
8     public int isPalinNumPossible(int input1){
9         // Read only region end
10         String str = String.valueOf(input1);
11
12         int count[] = new int[256];
13         Arrays.fill(count, 0);
14
15         for (int i = 0; i < str.length(); i++)
16             count[(int)(str.charAt(i))]+=;
17
18         int odd = 0;
19         for (int i = 0; i < 256; i++){
20             if ((count[i] & 1) == 1) odd++;
21             if (odd > 1) return 1;
22         }
23         return 2;
24     }
25 }
```
